

SYSTEM AND METHOD FOR INSERTING DISRUPTIONS INTO MERGED DIGITAL RECORDINGS

Abstract Of The Invention

A system and method for preventing the illicit copying and processing of digital recordings. In particular, the system inhibits the merging or stitching together of fragments of a digital recording in order to defeat a protection scheme. To accomplish this, the invention provides a compliant device having a system for merging digital recordings and which comprises a system for receiving a first digital recording and a second digital recording; and a system for merging the first digital recording and the second digital recording into an output, wherein the output includes a disruption between the first digital recording and the second digital recording. Attempts at recording stitched together fragments will thus result in an outputted recording having disruptions, which will cause frequent interruptions or loudness fluctuations during playback.
